WORKING PAPERS	<p>"The Impacts of School Finance on Student Achievement." [Job Market Paper]</p> <p><i>Abstract:</i> I investigate whether raising school operational finance improve students' performance in school and their education investment decisions. To do this, I assemble a novel dataset linking school finance records to survey and administrative data, which allow me to study the impact of a large-scale reform that raised school operations budgets in the Philippines. To identify the effects of the policy, I adopt an instrumented difference-in-difference (IV-DID) design that leverages plausibly exogenous variation in school finance based on reforms to the formula used to calculate the budget. My results show that a 10% increase in school budgets lowers the incidence of child labor among secondary-school aged children by 1.75 percentage points and raises the test scores of elementary and secondary school students in selected subject domains. .</p> <p>"Peer Effects in Learning and the Formation of Academic Interests"</p> <p>"Effective Training Through a Mobile App: Evidence from a Randomized Field Experiment" (with Qingxiao Li and Khandker Wahedur Rahman)</p>
